

Aries (March 21 - April 19) - Congratulations, It's your birthday month!

Unfortunately, planets in Pisces are having a huge impact on you this month. As you may know, Pisces is a water sign represented by fish swimming in opposite directions. This strongly suggests that you are about to become a victim of dolphin rape. I would urge you to avoid celebratory beach vacations, boat trips, or even standing on a dock. Dolphins have been known to leap onto docks to sexually assault a human they find particularly attractive.

Taurus (April 20 - May 20) - I don't even know how to tell you this. Your chart shows the 'monster moon' on 3/27 moving into Uranus. This indicates that you will soon be abducted by aliens in your sleep. This is where it gets really difficult; these aliens will require a lot of probing to conduct their tests. So, yes, that's it. You will be abducted by aliens and probed (you know what I mean) within the next several weeks. There is really no way to avoid this so my recommendation would be to develop insomnia or join a support group for alien abductions now.

Gemini (May 21 - June 20) - You have an exceptionally high number of heavenly bodies in your astrological sign right now Gemini! Good for you!! It's too bad that this means you will be forced into a ghost marriage. This is an ancient tradition in which a corpse is exhumed from its grave and you make a life-long commitment, body and mind, to said corpse. Regardless of your current relationship status, a

long lost relative will demand that you enter into this relationship immediately; you must obey.

Cancer (June 21 - July 22) - Simply put, the sun is doing weird things with Uranus this month. You'll try to ignore it for a while, maybe even a few weeks, but eventually the agitation in Uranus will become unbearable. You are going to have a complete emotional breakdown. I have an image of you being wrestled to the ground and placed in a straight jacket, but the new moon may give you the energy to outrun this fate. Either way, things are going to be tough for quite some time.

Leo (July 23 - August 22) - You are either going to become pregnant or impregnate someone this month. Whether this was intentional or not, you should be very concerned about this baby. Neptune, god of the sea, is dominating your house right now with a lot of confusion. This confusion will only be heightened when your child emerges half horse and holding a trident. You see, Neptune is also known by the Romans as god of horses. This half horse baby will be extremely intelligent, strong and of course, demonic.

Virgo (August 23 - September 22) - You feel like you're trapped in a haunted house filled with demons hiding in closets and trap doors that lead to the deep dark abyss. But don't fret - your paranoia has actually protected you thus far. The vultures really were circling above you. They weren't just in your dreams. It's

time, however, to liberate yourself. Let those demons go free. Climb the ladder out of that shadowy chasm. New friends will appear during the second half of March. Accept them. They can be trusted. Besides, you don't really have a choice. Unless, of course, you want to be trapped forever in that nightmarish house you call your mind.

Libra (September 23 - October 22) - Be sure you are ready for March's full moon on the 28th. One of your dead relatives is coming back as a Lycanthrope and is looking to devour you. Wait until at least April 1st to go for any walks near cemeteries or swamps. Whatever you do, don't go for any late-night strolls through the woods, as that would mean certain violent death. In order to reverse the curse for future generations, you must begin to treat your family members with more kindness and respect. On the other hand, you may want to turn to the dark side yourself. If that's your thing, try wandering deep into the forest, find some animal tracks filled with rainwater and drink from them. Then, just wait and see what happens to you on the 28th.

Scorpio (October 23 - November 21) - There's either romance in the air or blood trickling down your neck this March. Watch out for romantic phantasms that tap upon your window, promise you the world, and demand that you instantly let them into your life. These vampires only want to feed upon you like starved leeches and suck every last inch of life out of your body and soul. Your true love respects

boundaries and makes promises that can be kept. So sharpen your stakes, but be sure you know who to use them against. It can be difficult to differentiate the Vampyre from the Romeo. Then again, perhaps you want a creature of the night to drink from your veins. If so, you may get lucky - eternal love and damnation may be headed your way.

Sagittarius (November 22 - December 21) - It's time for you to be a wee-bit more generous and caring this month. Leave that waiter an extra couple of bucks. Pick up that purse and return it to the old woman who dropped it while crossing the street. Only that kind of behavior will save you from being kidnapped by the descendents of the nefarious goblin King Wynthe Kragh. His particularly ghastly and vengeful heirs have plans to take you to their home (a gigantic gnarled oak tree), pull your bones out of your body, and store them in a jar in the fiery caverns beneath their tree-lair. All of this can surely be prevented. It only takes one good deed to interrupt a series of events that would otherwise lead to a brutal, torturous, goblin-induced death

Capricorn (December 22 - January 19) - Mercury goes retrograde this month... and you know what that means: You're going to start feeling run-down, washed-out, enfeebled, groggy, befuddled, mentally wobbly, and somewhat delusional. Don't worry though - you're going to be okay. As long as you take some vitamins (preferably Flintstones), avoid drinking absinthe, and get plenty of exercise you'll

be back to your old self in no time. Be sure of this: there is no reason to see your doctor or make a trip to the hospital. Doing either would be an incredibly poor decision on your part. It's at the hospital where everything goes wrong, terribly wrong. The blood transfusion they'll prepare for you will carry with it pathogens never before seen. Will you turn into a zombie? Start to eat your own flesh? No one knows for sure, but those may actually be the better possibilities.

Aquarius (January 20 - February 18) - March is a good month for you to make some cash. Do something with those money-making ideas that have been floating around in your head for what seems like forever. If you don't take advantage of them now, it's likely someone else will beat you to it. You must be careful, however, not to get too greedy. It's not worth it to throw away your morals to make an extra dime. So when Old Scratch stops you when you're walking through the gloomy bleak part of the forest, tell him you're not interested in signing your name in his book. If, perchance, you do supply him with your John Hancock, be forewarned: all may go well for you in the beginning, but the Devil always comes to collect eventually.

Pisces (February 19 - March 20) - Mars is being extremely aggressive in your house of income this month. This may push you to grift a little more, take credit for co-workers' accomplishments or start a Ponzi scheme. Your Aquarius pal may try to get you in on one of his quick money ideas but unlike him, there is no possible way this will end well for you. With the scent of selfish desire in the air, you will most

certainly fall under the curse of a Jikininki, or Japanese corpse-eating ghost. Once your selfishness reaches a critical level, a Jikininki will appear. Upon making eye contact you will recoil in revolted horror, a look that will instantly become your permanent visage. You will be doomed to spend all eternity as a clawed, decomposing, corpse-eating creature. I can't stress this strongly enough: when you see a ten dollar bill on the ground this month, just keep walking
